ABSTRACT

MFUT is a decentralized payment solution built on the Tron blockchain. It leverages Tron's high throughput, low fees, and scalability to offer fast, secure, and cost-effective transactions. MFUT aims to be the leading payment method for DApps and P2P transactions, providing a frictionless experience for users and businesses alike.

We chose Tron, however, to indicate to our users that they are our primary emphasis. As a result, our cryptocurrency will be more stable and likely to survive than existing centralized and distributed cryptographic forms of money.

INTRODUCTION

The MFUT Token is the first cryptocurrency token designed to adapt to changing market conditions and rules, and its users have ultimate control over it. It is a platform that values human life, as indicated by its tagline, "Being Human is Given, but Maintaining Our Humanity is a Choice." "By keeping our word, we hope to meet the basic human needs of people who don't have a place to live, no one to turn to for help, and no resources with which to meet them Basic human needs." The MFUT Token is a TRC-20 token, which is the token standard used by Tron. We have noticed that investors are looking for new fair launch tokens that will allow them to maximize their profits in a short period.

We chose Tron, however, to indicate to our users that they are our primary emphasis. As a result, our cryptocurrency will be more stable and likely to survive than existing centralized and distributed cryptographic forms of money.

MISSION

Our client base and expansion objectives are vigorously sought by empowering newcomers and developing a strong community commitment to foster trust and address any problems that may emerge between the focal and members of our natural environment. Keeping the price of our token as a motivator for our representative holders. We must achieve our goal of providing a safe environment for our customers. We have no reservations about reaching an agreement on improvements to our understanding that will help our community, particularly homeless people in critical need of support. We do not want to see the market manipulated in any way. We are constantly looking for innovative methods to improve the lives of homeless people because we think that More Is Possible. In a variety of locations, we aim to provide a haven, permanent housing, and supportive services to persons experiencing chronic homelessness.

VISION

We feel that the greatest noticeable influence is when new people enter the market and decide to stay. Understanding how the bitcoin world works will be overwhelming for newcomers to the cryptocurrency arena. Our business intends to create a phase that will deliver a remarkable consumer adventure experience while simultaneously providing a decentralized area that will entice newcomers to stay by providing a passive revenue stream and a sense of fulfilment that their presence is aiding their fellow humans. whether as stagers or as sellers the goal of the MFUT Token is to provide a safe environment for exchanging valuable crypto while remaining decentralized. We are grateful to the holders who will help us tremendously expand our business, and we will continue to build this environment so that it can draw more invested people to the stage regularly.

WHY TRON?

What is TRON:

The entirety of this has given Tron the possibility to ascend high, rapidly, and assemble a great deal of help and interest from all sides. Since TRON empowers savvy agreements to be sent and executed, the chances of utility applications are limitless.

HIGH-THROUGHPUT

High throughput is accomplished by improving the TPS in TRON, which has outperformed Bitcoin and Ethereum, to every day utilize a commonsense degree.

HIGH-VERSATILITY

Applications are given a more extensive assortment of approaches to be sent in TRON because of its adaptability and profoundly powerful savvy contract. It can uphold tremendous quantities of clients.

HIGH-ACCESSIBILITY

More dependable organization structure, client resource, inborn worth and a more significant level of decentralization agreement accompany an improved prizes appropriation component

TOKEN PURPOSE

MFUT is designed to be used in:

- **P2P Transactions:**
 - Enable users to send and receive funds with minimal fees and near-instant transaction speeds.
- **DApp Payments:**
 - Facilitate microtransactions for DApps on the Tron network.
- **Merchant Payments:**
 - Allow businesses to accept payments in MFUT with low fees, compared to traditional payment gateways.

ECOSYSTEM OVERVIEW

TRON ECO SYSTEM:

Tron's blockchain is known for its high throughput, enabling over 2,000 transactions per second. By leveraging Tron's smart contract capabilities, MFUT ensures secure, transparent, and immutable transactions. Tron's delegated proof-of-stake (DPoS) consensus mechanism also ensures scalability while maintaining a high level of decentralization.

STAKING:

staking is quickly becoming a practice of gaining passive income by merely storing or locking funds in a wallet as more individuals, including institutional investors understand the crypto market's lucrativeness. Since staking cryptocurrencies necessitates certain technological crypto knowledge and compliance criteria, MFUT staking platforms are useful for allowing investors, including those lacking technical knowledge of cryptocurrencies, to stake proof of stake (PoS) coins and receive rewards. The staking network lends you their professional skills and authenticates stakes on your behalf for a small percentage of your staking prizes, allowing you to receive submissive profits. Staking platforms that enable investors to collect staking incentives have sprung up in response to the rapid growth in crypto staking. If you're interested in earning a passive income by staking and love supporting charities, this is the place to be

LENDING:

It is well known that cryptocurrency is gaining popularity as a payment option. That is not all; it can also be a fantastic financial opportunity. The assets might appreciate while you retain them without intending to sell them, which is what crypto lending allows you to accomplish. You may lend your bitcoin and receive interest in return, which is why this practice is so popular. Consider it like a savings account. A savings account allows you to keep your money while the credit union or bank pays you interest on the balance. In this manner.

ECOSYSTEM OVERVIEW

BURNING:

The decision to burn tokens is vested in the developer team of the coin by acting upon the strategy of sending cryptocurrency tokens to a wallet that has no access key. We are giving a certain %age of the circulating supply in the burning process. Without the private key, these tokens cannot be accessed by anyone and are lost forever. We intend to save our platform from sharks and whales.

LIQUIDITY:

Every trade contributes towards auto-generating liquidity that goes into multiple pools used by exchanges. If liquidity unlocked, the token developers can engage in the famed "rug pull." Our Platform offers our users a liquidity-locked system. Liquidity locked by delivering liquidity pool (LP) tokens to a time-lock smart contract and relinquishing ownership for a set length of time. Developers cannot recover funds from the liquidity pool unless they own LP tokens. This gives investors assurance that the token developers will not abscond with the liquidity funds. It is now standard practice for all token creators, which distinguishes a fake currency from a legitimate one.

TECHNOLOGY ARCHITECTURE

UNDERSTANDING TRC-20 TOKENS:

TRC-20 tokens are digital assets created and exchanged within the TRON blockchain network. Like other token standards like Ethereum's ERC-20, TRC-20 tokens adhere to a set of technical specifications that ensure their compatibility and usability across various decentralized applications (DApps) and exchanges within the TRON ecosystem.

KEY COMPONENTS OF TRC-20 TOKENS:

Smart Contracts:

- TRC-20 tokens are implemented using smart contracts on the TRON blockchain. These contracts define the rules and functionalities of the tokens, including transfer methods, total supply management, and token ownership.

Compatibility:

- One of the defining features of TRC-20 tokens is their compatibility with the TRON Virtual Machine (TVM). This compatibility allows developers to create and deploy tokens that can be seamlessly integrated with existing TRON-based applications and wallets.

Token Operations:

- TRC-20 tokens support standard operations such as transferring tokens between addresses, querying balances, and approving token transfers on behalf of other addresses. These operations are crucial for the functionality of decentralized exchanges (DEXs) and other financial applications.

TECHNOLOGY ARCHITECTURE

KEY ADVANTAGES OF TRC-20 TOKENS:

Efficiency:

- TRC-20 tokens benefit from the high throughput and low latency of the TRON blockchain, allowing for fast transaction confirmations and scalable token transfers.

Interoperability:

- Tokens compliant with the TRC-20 standard can easily interact with other TRON-based tokens and applications, fostering a thriving ecosystem of decentralized finance (DeFi) projects, gaming platforms, and more.

Economic Model:

- Developers can define various economic models for TRC-20 tokens, including token issuance, staking mechanisms, and governance structures, tailored to specific project requirements.

Community Support:

- The TRON community actively supports the development and adoption of TRC-20 tokens, providing resources, documentation, and developer tools to streamline token creation and integration.

TOKENOMICS

TOKEN
NAME

- META FUTURE TOKEN

TOKEN
SYMBOL

- MFUT

TOKEN

- TRON NETWORK

TOTAL
SUPPLY

- 10,000,000,000

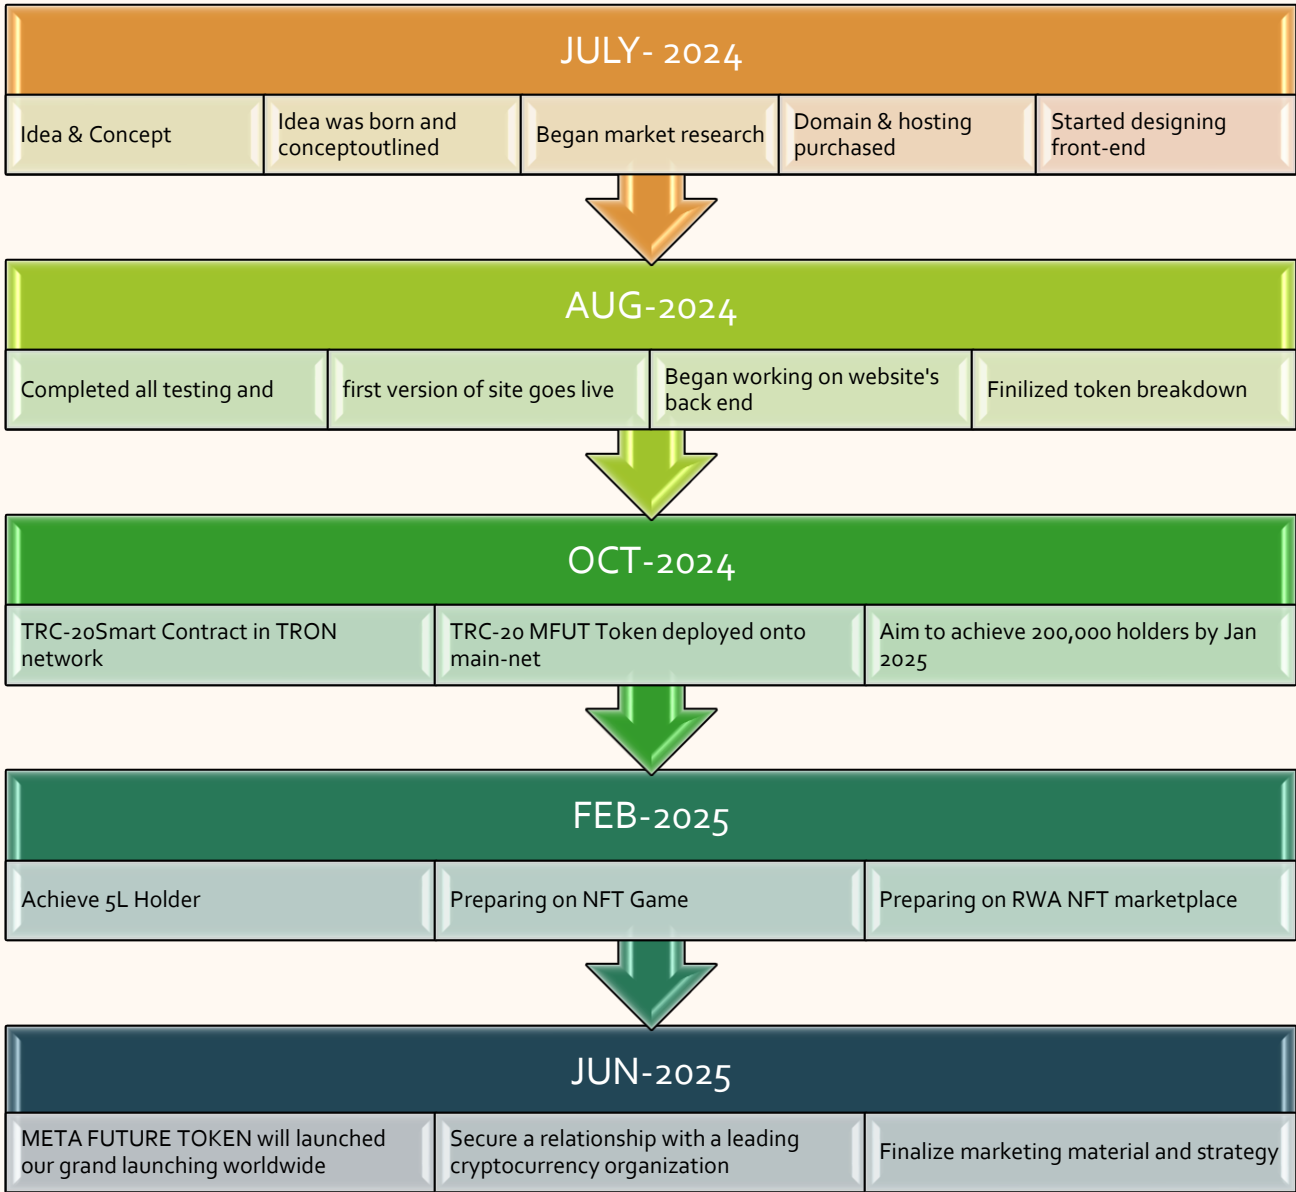

DISTRIBUTION

- ❖ FORTY PERCENT FOR PUBLIC SALE
- ❖ TWENTY-FIVE PERCENT FOR ECOSYSTEM DEVELOPMENT
- ❖ FIFTEEN PERCENT FOR PARTNERSHIPS
- ❖ TWENTY PERCENT FOR THE TEAM

ROAD MAP

OUR FEATURE PROJECTS

MFUT'S FEATURE PROJECTS:

NFT GAMING:

- NFT games are video games that use NFTs as a core part of their game. In the context of games, NFTs are simply a blockchain token with a unique barcode that can be distributed by games and owned by players. Thus, the design space for using NFTs within games is effectively limitless—they can be used to represent characters, items (both full and crafting), weapons, skins, and any other in-game asset that requires the property of non-fungibility.

RWA MARKET PLACE:

- Asset-based NFT Marketplace is a platform where Non-Fungible Tokens (NFTs) are created to represent ownership of real-world assets (RWAs) such as real estate, artwork, collectibles, or other valuable physical assets.
- One of the primary advantages of tokenizing RWA using NFTs is the opportunity for fractional ownership. Instead of requiring investors to buy an entire asset, NFTs enable the division of ownership into smaller, more manageable fractions. This lowers the barriers to entry for investors and provides access to previously inaccessible assets.

QR-CODE:

- MFUT's QR-code tool for distribution of digital assets, allow anyone with a smartphone to access the RWA.
- We offer RWA holders a platform for transparently buying and selling digital assets. Users may also engage in advanced features such as auctions to provide a different buying experience.

OUR TEAM

FOUNDER DETAILS:

SURESH KUMAR M

Address: #38, Balaji Nagar Main Road,
Avarampalayam,
VTC: Coimbatore South,
PO: Siddhapudur,
Coimbatore,
State: Tamil Nadu-641044
Country: India.

LEGAL CONSIDERATION

It is required that you read this legal disclaimer section carefully. Get advice from legal, financial, taxation, or other competent law practitioners if you have any doubts. All the information provided here is not intended to be complete, and it should never be construed as a part of different contractual arrangements. Our firm conviction is that the information provided in this white paper is accurate and up to date and that all products, services, technical architecture, token distribution, and company timelines are authentic and up to date. Furthermore, all these materials may have changed without notice, and they can never be considered a signatory agreement of advice.

NO ADVICE

This white paper does not obligate anybody to sign a contract or make a legally enforceable commitment to contribute. This white paper also does not constitute any form or part of any opinion that can be construed as advice, or that can be used to sell or solicit any offer by Trillions to purchase our token, nor shall it be interpreted as a part of any effect that can be used in the formation of a contract or an investment decision.

COMPLIANCE WITH TAX OBLIGATIONS

Users of the Website are entirely responsible for determining what, if any, taxes, if any, apply to their transactions. The website's owners or authors are not responsible for choosing which taxes apply to transactions. Limitation of liability MFUT TOKEN shall not be held liable for any loss or harm resulting from the use of this website's material, including written material, links to third-party sites, data, quotations, charts, and buy/sell signals. Please be fully informed about the dangers and expenses of trading assets on the financial markets (digital or otherwise). ICOs is one of the riskiest investing options. There is a chance you will lose your entire investment.

INVESTMENT RISKS

Trading cryptocurrencies have a high-risk level and is not suited for all investors. You should carefully evaluate your investing goals, level of expertise, and risk appetite before opting to trade cryptocurrencies, tokens, or any other digital asset.

CONCLUSION

MFUT has firmly established itself as a promising Tron scalability project, thanks to its highly capable development team, technical expertise, and commitment to the blockchain community. With a focus on enhancing the scalability and user experience of the Tron network, MFUT is poised to play a significant role in shaping the future of blockchain technology. As the project continues to evolve and gather support, it is one to watch closely in the ever-changing landscape of blockchain innovation. It may increase the innovation of our future projects.

-Team MFUT
